SUMMARY

Developer with 5+ years of experience building ERP systems, mobile apps, and financial platforms, from Laravel and MySQL to Go microservices, PostgreSQL, and Nuxt. Comfortable across the backend, database, frontend, and deployment, with experience leading modules, drawing process flowcharts, and working directly with clients.

EXPERIENCE

Backend Developer · PT Dynamic Talenta Navigator — Jul 2025 – Present

- Develop a large-scale financial platform, from its Laravel version to a new version built on Go microservices and Nuxt (~1,400 commits).
- Built an Excel/CSV import engine that loads 1 million rows in under 5 minutes without locking tables in use.
- Built an in-app AI assistant (RAG with pgvector) with per-role access; personal data is never sent to the model.
- Built a REST API with Hono on Deno and Supabase (email/OAuth login, OTP) with CI/CD, and a Nuxt + Firebase admin panel.
- Created a Go modular-monolith boilerplate for the team, prototyped gRPC microservices with load testing, and integrated Kafka into a Laravel backend.
- Set up deployment, monitoring, and observability across several servers (Docker, GitHub Actions, Grafana, Prometheus, Loki).

Senior Full-Stack Developer · PT Lingkar Kreasi, Jakarta — Sep 2023 – Jul 2025

- Developed and optimized ERP modules and integrated new features into the running system; gave direction as project leader.
- Sped up summary reports with MongoDB and large data imports/exports with Python Flask and a queue system.
- Designed process flowcharts for clear communication and project planning.
- Built a mobile app with Flutter on a Laravel API.

Full-Stack Developer · PT Lingkar Kreasi, Jakarta — Jun 2021 – Sep 2023

- Built and extended client web applications with Laravel, Bootstrap, jQuery, and MySQL.
- Worked with clients directly to create and adjust applications to their needs; collaborated through Git.

Intern · VEDC Malang — Oct 2019 – Mar 2020

- Built a Delphi desktop app to support civil servants' work and helped run training sessions.
