SUMMARY

Backend and Full-Stack Developer with 5+ years of experience building ERP systems, mobile apps, and financial platforms, from Laravel and MySQL to Go microservices, PostgreSQL, and Nuxt. Experienced in REST and gRPC APIs, database performance, large data imports, CI/CD, and monitoring, as well as leading modules, drawing process flowcharts, and working directly with clients.

WORK EXPERIENCE

Backend Developer - PT Dynamic Talenta Navigator — Jul 2025 - Present

- Develop a large-scale financial platform, from its Laravel version to a new version built on Go microservices and Nuxt.
- Built an Excel/CSV import engine in Go and PostgreSQL that loads 1 million rows in under 5 minutes without locking tables in use.
- Built an in-app AI assistant (RAG with pgvector, function calling) with role-based access; personal data is never sent to the model.
- Built a REST API with Hono on Deno and Supabase (email/OAuth login, OTP) with CI/CD, and a Nuxt and Firebase admin panel.
- Created a Go modular-monolith boilerplate for the team, prototyped gRPC microservices with load testing, and integrated Kafka into a Laravel backend.
- Set up Docker deployment, GitHub Actions CI, and monitoring (Grafana, Prometheus, Loki) across several servers.

Senior Full-Stack Developer - PT Lingkar Kreasi, Jakarta — Sep 2023 - Jul 2025

- Developed and optimized ERP modules, integrated new features into the running system, and gave direction as project leader.
- Improved summary report performance with MongoDB and large data imports/exports with Python Flask and a queue system.
- Designed process flowcharts for clear communication and project planning.
- Built a mobile app with Flutter on a Laravel API.

Full-Stack Developer - PT Lingkar Kreasi, Jakarta — Jun 2021 - Sep 2023

- Built and extended responsive web applications with Laravel, Bootstrap, jQuery, and MySQL.
- Worked with clients directly to create and update applications to their needs; collaborated through Git.

Intern - VEDC Malang, Malang — Oct 2019 - Mar 2020

- Built a Delphi desktop app to support civil servants' work and assisted in running training sessions.

PROJECTS

- **Smart Filler** (JavaScript, Chrome Extension): fills web forms with realistic test data on React, Vue, Angular, PrimeVue, and MUI, in English and Indonesian. github.com/lukaririnki26/smart-filler
- **Go and Rust boilerplates** (Go, Rust, Docker): modular-monolith starters with JWT authentication, migrations, and seeders. github.com/lukaririnki26/boilerplate-go, github.com/lukaririnki26/boilerplate-rust

SKILLS

Backend: Go, PHP, Laravel, Python, Flask, REST API, gRPC, NATS, Kafka
Databases: PostgreSQL (partitioning, indexing, query tuning), MySQL, MongoDB, Redis, pgvector
Frontend and Mobile: Vue.js, Nuxt, TypeScript, JavaScript, PrimeVue, Bootstrap, jQuery, Flutter
DevOps: Docker, GitHub Actions, CI/CD, Caddy, Nginx, Grafana, Prometheus, Loki, Supabase, Git
Soft Skills: Communication, Teamwork, Leadership, Problem-solving, Adaptability

EDUCATION

SMKN 1 Kota Pasuruan - Pasuruan, Jawa Timur — 2018 - 2020
